CHETHAN S.

Cloud Platform Architect | Governance, DevOps & Platform Engineering

chethan@staygeo.com | linkedin.com/in/gischethans | x.com/gischethans | staygeo.com/

Cloud Platform Architect with 14+ years of experience designing and evolving enterprise-scale cloud platforms supporting 200+ engineers across 10+ subscriptions. Proven expertise in modernizing on-prem workloads to cloud, defining CI/CD reference architectures, implementing governance guardrails, and enabling cost-aware cloud consumption models across a multi-million dollar estate spanning production, staging, and dev/test tiers — primarily on Azure, with tooling and practices transferable across cloud environments.

Combines deep hands-on DevOps expertise with system-level architectural decision-making, balancing security, scalability, and engineering velocity. Experienced in mentoring engineers, guiding cross-team platform adoption, and partnering with senior stakeholders to align architecture with ISO 27001:2022 compliance and enterprise risk posture.

Key Contributions

- Influenced cloud architecture standards across 10+ subscriptions supporting 200+ engineers and multiple product teams.
- Shaped multi-subscription cloud architecture covering network segmentation, access control models, private connectivity standards, and policy-driven governance controls.
- Designed resilient CI/CD reference architecture leveraging Kubernetes job orchestration, container registry caching, and elastic autoscaling build agents to improve throughput and reduce external dependency risk.
- Led on-prem to cloud migration initiatives, advising on network design, access control, deployment isolation, and infrastructure-as-code adoption.
- Implemented cost-aware cloud strategies including compute SKU governance, Spot/preemptible VM segmentation for non-production workloads, and monitoring-based spend visibility improvements.
- Partnered with engineering leadership and audit stakeholders to align platform evolution with ISO 27001:2022 controls and compliance expectations.
- Mentored engineers on CI/CD architecture, Kubernetes deployment patterns, and secure cloud design practices, improving platform adoption and reducing recurring operational escalations.
- Acted as a technical escalation point for complex cross-team cloud and DevOps challenges.
- Participated in DevOps hiring processes, evaluated candidates, and contributed to capability development discussions.

- Facilitated technical alignment discussions between product, security, and platform stakeholders to balance risk, cost, and delivery velocity.
- Conducted knowledge-sharing sessions to improve engineering maturity in cloud-native development and DevOps practices.

Technical Expertise

Cloud Architecture & Governance: Multi-subscription cloud environments (Azure), Network segmentation & private connectivity, RBAC modeling, Policy-driven governance, ISO 27001:2022 alignment, Cost-aware cloud design

Platform Engineering & CI/CD Architecture: GitHub Actions, Azure DevOps, Jenkins, Kubernetes-based CI execution patterns, Elastic autoscaling build agents, Container registry strategy

Infrastructure as Code & Automation: Terraform, ARM/Bicep, Ansible, PowerShell, Shell scripting

Containers & Orchestration: Docker, Kubernetes, Helm

Observability & DevSecOps: Cloud-native monitoring (Azure Monitor, Application Insights), Secure SDLC, SonarQube, Synopsys Black Duck

Cost Optimization & Resource Strategy: Compute SKU governance, Spot/preemptible VM segmentation, Monitoring-driven right-sizing, Spend visibility frameworks

AI-Assisted Engineering: GitHub Copilot, ChatGPT, Gemini, OpenAI API experimentation, prompt-driven development workflow

Supporting Technologies: Git, Bitbucket, JIRA, Confluence, VMware ESXi, Hyper-V

Work Experience

HEXAGON CAPABILITY CENTER INDIA PVT. LTD., HYDERABAD

Global technology R&D hub for Hexagon AB, a global leader in digital reality solutions

Senior DevOps Lead JAN 2023 – FEB 2026

- Led cloud migration and platform integration for the OnCall Mobile product, ensuring production readiness, scalability, and operational stability.
- Contributed to ISO 27001:2022 audit preparation by aligning DevOps processes with compliance controls.
- Actively explored AI-assisted engineering workflows using tools like GitHub Copilot, ChatGPT, and Gemini to improve developer productivity and problem-solving.
- Designed resilient CI/CD and runtime platforms, stabilizing pipelines via container registry caching, Kubernetes job offloading, and elastic agents to improve performance and reliability at scale.
- Defined cloud governance guardrails using policy-as-code (Azure Policy) to control costs, standardize compute SKUs, and maintain compliance across 10+ subscriptions.

- Guided on-prem to cloud migration architecture covering secure private connectivity, RBAC design, identity & access management (Azure Entra), and environment isolation strategies aligned to least-privilege principles.
- Standardized infrastructure provisioning and observability using IaC and cloud-native monitoring, improving deployment consistency and reducing time to diagnose CI/CD and production issues.
- Mentored and enabled engineering teams on CI/CD, IaC, and observability practices, raising platform maturity and enabling teams to operate with greater autonomy.

Technical Lead JAN 2020 – DEC 2022

- Designed and enforced platform security controls, automating database firewall management (Azure SQL) and private connectivity to cut manual intervention by over 90% while improving isolation and access governance.
- Implemented private connectivity solutions (private links and endpoints) to eliminate public exposure of cloud workloads.
- Defined scalable Kubernetes deployment patterns, maintaining Helm charts and manifests to support high availability, disaster recovery, and consistent application scaling.
- Re-architected CI execution capacity using elastic autoscaling agents (Azure VMSS), cutting build queue times from 15 minutes to under 2 minutes through on-demand capacity.
- Designed cost-aware cloud runtime strategies, adopting Spot/preemptible VMs for dev/test workloads and introducing automated spend alerts to prevent cost leakage.
- Standardized DevOps platform governance and auditability, automating permissions reporting and administering core toolchain (Azure DevOps, SonarQube, Black Duck) to enforce least privilege and platform stability.
- Contributed to organizational scale, supporting DevOps hiring and onboarding across Hexagon divisions to ensure platform practices scaled with team growth.

Software Analyst → Senior Software Analyst → Software Consultant JULY 2011 – DEC 2019

- Pioneered DevOps adoption at Hexagon SIG, transitioning from my QA role to help establish early automation and release practices that became the foundation for enterprise-wide CI/CD.
- Standardized build and quality pipelines, onboarding legacy applications to a modern CI platform (Azure DevOps), introducing containerization, and integrating security and quality scans (SonarQube, Black Duck) to improve release consistency.
- Operated and evolved core engineering platforms, supporting engineering toolchain modernization and collaboration workflows, managing virtualization and database environments to support multiple product teams efficiently.
- Drove platform and process improvements beyond tooling, evaluating new technologies, conducting process training, and contributing to UX and documentation to improve cross-team effectiveness.
- Extended influence beyond the team, serving as SPOC for Microsoft Gold Partner certification, authoring technical blogs, delivering internal training, and contributing competitive insights to product discussions.

Volunteer Experience

- Trained over 200 students and faculty in DevOps fundamentals through NASSCOM GCC Skills Development Initiative

Education

M.Tech, Remote Sensing & GIS 2011

NIT Karnataka CGPA: 8.76

B.E., Civil Engineering 2009

NMAM Institute of Technology 77.86% (First Class with Distinction)
